PROFESSIONAL SUMMARY

Highly organized and detail-oriented Information Systems professional, with a relentless drive to exceed expectations and deliver high-quality results. Demonstrates a strong ability to analyze data, develop effective business strategies, and provide innovative solutions to complex problems using technical and analytical insights. Eagerly seeking to leverage academic knowledge and practical skills to actively contribute to team success and organizational growth.

EXPERIENCE

Sharjah Government Media Bureau Information Systems & Digital Platforms

Internship Sharjah,

UAE May 2026 – Present

- Mapping and optimizing digital media workflows and content distribution systems using UML (Activity and Use Case diagrams) to streamline operational efficiency across the bureau.
- Managing and structuring enterprise-level digital platforms and web content systems to support e-business objectives and public communications.
- Applying advanced AI prompt engineering techniques to assist in the structured retrieval, summarization, and management of media archives and government press materials.
- Collaborating with cross-functional teams to analyze system requirements and implement digital transformation initiatives within a high-stakes government sector environment.

EDUCATION

June 2022- Present

Expected Graduation- 2026

Bachelor of Science in Information Systems E-Business Management
Ajman University

ACADEMIC PROJECTS

Grad Project: Trustio – Secure Second-Hand Marketplace Platform | Spring 2026

- Developed a secure, sustainability-focused web application tailored for the UAE market using **Wix Studio** and **JavaScript**, addressing critical gaps in user verification and trust.
- Engineered a modular backend architecture to automate role-based access control (RBAC), distinguishing between Buyers, Sellers, and Administrators.

- Implemented a custom **Emirates ID verification system**, utilizing server-side validation and admin workflows to authenticate sellers and prevent fraud.
- Designed a relational database schema using **Wix CMS Collections** to manage complex relationships between Listings, User Profiles, Bids, and Orders.
- Built dynamic front-end features including real-time search filtering, secure in-app messaging, and a verified seller dashboard.

Project: Customer Segmentation & AI-Based Dashboard with Power BI | Spring 2026

- Developed an interactive **Power BI dashboard** integrating **Copilot AI** to transform raw customer data into actionable managerial insights.
- Implemented **K-Means clustering algorithms** and **RFM (Recency, Frequency, Monetary) analysis** to segment customers into six distinct behavioral groups.
- Processed and analyzed complex datasets including demographic, behavioral, and expenditure variables to identify patterns in spending and engagement.
- Created advanced visualizations (Sunburst charts, Scatter plots) to evaluate cluster compactness and interpret correlation between income and monetary value.

Project: GlucEase – HealthTech System Analysis & Design | Fall 2025

- Managed the full Agile SDLC for a diabetes management solution, conducting feasibility studies (Technical, Economic, Organizational) and risk assessments.
- Led requirements gathering through stakeholder interviews and questionnaires to define core functionalities like doctor verification and subscription models.
- Created comprehensive system modeling documentation, including UML Diagrams (Use Case, Sequence, Activity, Class) and architectural blueprints.
- Designed the system to align with UN Sustainable Development Goal 3 (Good Health and Well-being), focusing on remote patient monitoring and accessibility.
- Conducted cost estimation and ROI analysis to demonstrate the platform's economic viability and potential for reducing patient healthcare costs.

Project: SQL Data Analysis Case Study | Fall 2025

- Leveraged **PostgreSQL** to perform complex data analysis, utilizing **advanced JOINS**, subqueries, and **aggregate functions** to extract actionable insights.
- Conducted rigorous **data cleaning and validation** to transform raw data into structured formats, significantly improving reporting accuracy and data integrity.
- Designed optimized queries to efficiently process and analyze large structured datasets.

Project Title: Mitigating Hallucinations in Healthcare LLMs using Retrieval-Augmented Generation (RAG)

- **Architected** a Retrieval-Augmented Generation (RAG) pipeline designed to minimize hallucinations in healthcare-focused Large Language Models, ensuring reliable and accurate data retrieval.
- **Designed and implemented** a core defense-in-depth methodology, utilizing advanced prompt engineering techniques to safely structure complex AI interactions.

- **Collaborated** with a technical project team to map the system architecture, bridging emerging artificial intelligence applications with rigorous information systems standards.
- **Applied** system analysis and e-business management principles to solve real-world medical informatics challenges, focusing on data integrity and user trust.

CERTIFICATES

- Creative Thinking: Techniques and tools (8/3/2023)
- Foundations of Digital Marketing and E-Commerce (26/10/2023)
- Introduction to HTML (2/4/2024)
- Prepare Data for Exploration (9/8/2024)
- Create and manage a project dashboard with Wrike (6/11/24)
- Understanding Basic SQL Syntax (6/11/24)
- AWS Academy Graduate - AWS Academy Cloud Foundations (4/4/2025)
- AWS Academy Graduate - AWS Academy Cloud Operations (29/4/2025)
- Peer tutoring training program (12/10/2025)
- DEC x Ajman University AI Literacy for All (12/2/2026)
- SAP Dual Study Program - Implementing SAP S/4HANA Cloud Public (28/4/2026)
- Fundamentals of AI agents (30/5/2026)
- Computer Vision (30/5/2026)
- Intro to Deep Learning (3/6/2026)

SKILLS & APPILITIES

- Teamwork and Collaboration
- Working under pressure
- Excellent communication skills
- Problem-Solving
- Computer skills

LANGUAGES

- Arabic – Native
- English – Bilingual
